Excerpt from Sanitation District 14 email – clarification on 2020 plan.....

.....according to the 2020 Facilities Plan, the District will deliver enough water to make up for the net losses, considering evaporation, percolation (and precipitation) to maintain the 400 acres. In addition, flushing requirements will be determined and considered. So, there will not be periods of Piute Ponds drying up due to flows considered in the 2020 Facilities Plan. Any dry periods will probably be a result of management as determined in the Management Plan development.
